

Parts for Cushion Tire Forklift

Parts for Cushion Tire Forklift - Cushion tires are a firm tire with a smooth profile. Its' tread is bonded to a steel ring so as to form the tire, and the tire is pressed onto a hub that is mounted to the lift truck. These types of tires are ideal to utilize in smooth floor warehouses and are obtainable in various rubber or polyurethane compounds.

Consisting of polyurethane, a poly tire is a really solid tire. These kinds of tires are utilized instead of cushion tires whenever there is a higher load capacity than could be attained with a cushion tire and such applications that require a lower steering effort. Poly tires come in in a variety of hardness ratings so as to meet different individual application requirements. Orderpicker lift trucks and Narrow Aisle models will typically utilize small diameter poly tires for their outrigger load wheels.
