

Remanufactured Lift Truck Parts

Remanufactured Forklift Parts - Lift trucks are really pricey pieces of equipment. A five thousand pound new electric model could cost between eighteen thousand to twenty five thousand and some thousands of dollars more will be needed for a battery and a battery charger. The same internal combustion lift truck of similar lift capacity will cost slightly less and the diesel models which are capable of heavier lifting capacities can cost upwards of \$100,000. Reconditioned lift trucks are a choice to save much money since they cost less than half the price of new models.

Several purchasers may be leery about obtaining a used or reconditioned forklift in view of the fact that they feel they would have to spend more on maintenance. Then again, a properly reconditioned lift truck will be able to run just along with a brand new one. Though your lift will get heavy use, as long as you take good care of the machinery, it will serve your requirements and possibly save you lots of money.

It is essential to determine what the seller means by a reconditioned or refurbished lift truck when considering obtaining a used lift truck. A lot of companies do a really good job reconditioning a model prior to selling it. This consists of disassembling the forklift, rebuilding the engine, sandblasting the lift and after that reassembling the whole thing and finishing with a fresh coat of paint.

To properly and thoroughly reconstruct a lift truck engine, a good company would totally disassemble it. A heat cleaning system could then be used to clean all the components. Once this step has been finished, all of the components are checked to see if they have any extensive wear, any defects or breakage. Certain parts like cylinder heads, crankshafts, cylinder blocks and connecting rods are resized, reground and resurfaced if necessary. Other parts such as bolts, gears, nuts etc. are replaced or repaired as considered necessary.

Once the overhaul has been done, the engine is rebuilt manually. After being put back together, a series of tests are applied to the running machinery in order to check all of the parts and be certain there are no leaks or problems. If any problems occur, the crucial changes are made.

There should be no reason to be apprehensive about purchasing a reconditioned or refurbished forklift from quality sellers. The process of rebuilding the machinery ensures the utmost in dependability. Maintenance costs can really work out to be less as you will avoid the initial phase of higher repairs projections that a new lift truck has as it is broken in. By following routine upkeep schedules and taking care of the machinery properly, a reconditioned lift truck would serve you well.
